PROFESSIONAL SUMMARY

Customer-facing engineer across B2B SaaS, AI SaaS, and enterprise IT — integration ownership, live technical troubleshooting, and executive communication, now paired with hands-on AI engineering: five live deployments, including three production AI systems. I work the full solutions loop: reproduce the customer's problem in a sandbox, diagnose it against real system behavior, walk the customer through the fix live, and feed what customers hit back to Engineering and Product.

PROFESSIONAL EXPERIENCE

Publishing.ai — Support Engineer / AI Product Support | 01/2024 – 02/2025 (concurrent with The Vitamin Shoppe)

- Worked directly with individual authors and business/publishing customers of an AI manuscript-generation SaaS — direct B2B and business-customer exposure in an AI product environment.
- Validated AI-generated manuscript output against each customer's intended use, confirming generative-AI results were correct and fit for purpose.
- Ran live Zoom troubleshooting sessions; investigated and reproduced customer-reported failures (AI output inconsistencies, platform logic errors, workflow failures, account misconfiguration).
- Documented defects with reproduction steps, logs, and business impact; escalated to Engineering; participated in bug bashes, testing cycles, and release validation.
- Acted as the bridge between customer experience, AI/product behavior, and Engineering/Product — surfacing recurring issues and improvement proposals that informed UI and product changes.

The Vitamin Shoppe — IT Support Engineer | 09/2021 – Present

- Self-initiated, designed, and presented an interactive AI opportunity proposal to IT leadership (Director, Manager, and engineering team), mapping AI automation opportunities across service-desk, HR-system, and identity workflows.
- Selected for an internal AI initiative building a customer-facing chat assistant and operational dashboard for retail systems; authored the JSON configuration defining AI agent behavior and logic.
- Key support resource for the enterprise finance-system migration (Sage Intacct to NetSuite) — validated data flow, configuration accuracy, and post-migration sync issues across the finance team's systems of record.
- Acted as the connecting point between finance stakeholders and technical teams during the Ramp AP-automation rollout — translating system-level issues into plain language and surfacing recurring problems before they became escalations.

Shop Monkey — QuickBooks Online Integration Specialist (B2B SaaS) | 08/2019 – 09/2021

- Selected for a newly created role as one of only two people company-wide owning the full QuickBooks Online integration experience for a B2B SaaS customer base — no support tier above the role except Engineering; final escalation point for QBO issues company-wide.
- Resolved the product's most common recurring failure pattern (item-level vs. chart-of-accounts mapping), a major driver of customer tickets, by walking shop owners, bookkeepers, and accountants through the actual sync logic live.
- Ran scheduled live Zoom screen-share sessions with non-technical shop owners, bookkeepers, and accountants — using real transaction codes and screenshots to de-escalate and resolve.
- Owned deposit and reconciliation troubleshooting end to end: bank-feed matching, undeposited funds, Stripe/ACH reconciliation, misapplied payments; handled Canada-specific (CRA) sales-tax sync in coordination with engineers.
- Reproduced every customer-reported bug in a sandbox before troubleshooting; tested new releases pre-rollout for integration impact and built the internal training library used to onboard the next hire.

Hackensack Meridian Hospital — Data Analyst | 06/2017 – 08/2019

- Analyzed inpatient and outpatient chart data in Epic, the enterprise electronic health record system, focusing on high-value cases of approximately $150K+.
- Worked closely with Medical Records and medical-coding teams to review and validate chart information across clinical, data, and coding functions.

SELECTED AI PROJECTS — ALL LIVE, DESIGNED AND DEPLOYED SOLO

Enterprise AI Copilot Platform — Creator

Live: copilot-platform.onrender.com · Code: github.com/FTD-minds/copilot-platform

Model-agnostic enterprise copilot platform: retrieval-augmented generation with source citations, an Anthropic/OpenAI provider router, and evaluation-gated CI/CD with a live public eval dashboard. Module 1 diagnoses ERP sync and reconciliation failures — the problems I resolved for customers at Shop Monkey — and shows the math behind every diagnosis.

Internal AI Platform — Presenter/Builder

Live: internal-ai-platform.netlify.app

Interactive AI opportunity proposal presented to IT leadership: three enterprise workflows including an AI service-desk pipeline with human review and audit trail. Every simulation and projection explicitly labeled as illustrative.

MindNest (now ParentNest) — Sole Engineer

Live: mindnest-delta.vercel.app · Code: github.com/FTD-minds/mindnest-showcase

AI parenting companion built as a complete subscription product: RAG pipeline (pgvector), Postgres Row Level Security, Stripe billing, CI quality gate — designed, built, and deployed end to end.

DialysisOS — Builder

AI-powered executive operations dashboard for a dialysis-center operator, in use at one center — natural-language operational reporting via Claude API and Google APIs (OAuth). Business operations only; no HIPAA/PHI.

TECHNICAL SKILLS

- Customer-Facing: live technical demos and troubleshooting (Zoom screen-share), sandbox-first issue reproduction, root-cause analysis, executive and stakeholder communication, runbooks and enablement documentation
- AI / LLM: RAG with source citations, AI output validation, evaluation harnesses and eval-gated CI, prompt engineering, Claude API, OpenAI API, embeddings and vector search (pgvector)
- Integrations and Enterprise Systems: QuickBooks Online/Desktop, NetSuite, Sage Intacct, Ramp AP, Stripe billing/webhooks, OAuth/SSO, ServiceNow, EasyVista, Active Directory, Okta, Epic (electronic health records)
- Engineering: Python, TypeScript/JavaScript, SQL, FastAPI, Next.js, React, PostgreSQL/pgvector, Supabase, Docker, GitHub Actions CI/CD
- Support Platforms: Zendesk, HubSpot, Chargebee, Notion, Guru

EDUCATION

University of Central Florida — Orlando, FL — Bachelor's degree
